NewCode
Motor Protection and Control Relay with Communication
NewCode Motor Protection Control and Communication Relay

A South African Company to be Proud of
The 32 Unit MMI offers an exceptional user friendly interface to up to NewCode relays. The system integrator or operator will have access to the NewCode actual and parameter data without the use of a laptop or PC.

- Control motor Function
- Standard Amp Meter
- Easy Trip Navigation
- Fully Customisable
- Automation Capabilities
- Modbus, Profibus and Ethernet
**About**

The NewCode Relay is an ISO 9001:2008 compliant, three-phase motor protection relay, designed and manufactured in South Africa. It is a micro-controller based precision instrument for three-phase induction motor protection with advanced control logic features as well as multiple motor starter control circuit configurations. The relay is designed for the low voltage motor protection market. The current transformers, including the core balance current transformers are external. Certain models cater for combined current and core balance current transformers, maximum flexibility is maintained by allowing separate C.B.C.T’s with interposing current transformers with a software selectable, 1 to 10 amp secondary winding. Class 1, 5VA.

**Protection Features:**
- Thermal Overload
- Locked Rotor
- Running Stall – Jam
- Vectorial Stall - Start Stall
- Unbalanced Current
- Single Phasing
- Minimum Load – Underload - Dry Run
- Earth Leakage
- Earth Fault
- Short-circuit
- Starts per Hour Limitation
- Overvoltage – Undervoltage
- Phase Rotation
- Over Frequency – Under Frequency
- Main-Circuit Insulation Failure Lock-Out

**Management Features:**
- Power Factor Measurement
- Power Consumption Measurement
- Statistical Data
- 1400 Event Records with time and date stamp
- 35 Last Fault Records with time and date stamp

**Configurable Automation Features:**
- Timers
- Real Time Clock (24 Hour)
- Starter Controller Logic
- Logic Function Blocks
- 7 Field Inputs
- Motor Parameter Calculator
- 4 Programmable Outputs
- 3 Phase Recorder
- On-board Simulator for Training / Commissioning
- Multiple Communication Protocols

The NewCode relay is fully configurable with the aid of frontend software or a man machine interface unit (MMI). Event records can also be downloaded with the aid of the laptop for further analysis. All the settings can be password protected. The relay has an onboard database where time and date stamped records are kept. Two types of records are kept namely fault records (35 last faults) and event records (1400 events). In the case of event records, the user has limited access rights (read only).

The front-end also has a data recorder and a spectrum analyser which could be used to analyse motor performance and supplied power quality respectively. The spectrum analyser can detect harmonics up to the 9th harmonic on any of the three phase currents.

The relay detects earth leakage currents with the aid of the external core balance current transformer and is configurable to operate in inverse definite minimum time (IDMT) or instantaneous definite time (IDT) mode. A unique feature is added to the relay in the form of simulation. This function could be used for personnel training or relay functionality testing.
NEWCODE PROFINET

PROFINET Cyclic Message Structure:
• 1 to 4 Cyclic Out (From PLC) bytes to NewCode
• 1 to 2 bytes are bit configurable in the NewCode.
• 2 to 4 are used to drive the 4 to 20mA outputs.
• 4 to 21 Cyclic In (To PLC) words selectable.
• 2 Word messages bits are configurable.

PROFINET:
• Acyclic communication same as old F880 structure to ease data table upgrade.
• Can be used in star, ring or line network topology.
• NewCode real time clock synchronization for
• Event and fault time stamping in NewCode relay FRAM.

PROFINET Configuration
PROFINET Variable Table, PROFINET Test Tab and NewCode Setup

NewCode MMI 420 - FPR0415
Technical Specifications

Auxiliary Power Supply
Voltage requirements : 110 - 230 V AC/DC
Power requirements : 2.5 Watt

Operating Environment
Temperature : -20°C - 65°C
Relative humidity : < 85%

Communication Protocols
Profibus DPV-1, Modbus, CanBus

Input Converter
Class : Class 1
Rating : 0.1 VA
Frequency Response : 40 to 66 Hz

Overload Trip Delay Curves
Class 3 – 40 to IEC 60255-8 Specification

Unbalance / Single Phasing Setting
Level Setting : 5 – 50% Ie (M.F.L.)
Trip Delay : 1 to 10 seconds

Underload Detection
Range : 10 to 100% of Max Load Setting
Trip Delay : 1 to 10 seconds

Priming Time Available : 1 to 200 seconds
Power Factor Setting : 0.1 to 1 on Minimum Load Setting

Auto Reset Limiter
Auto Reset limited to only 3 times per hour

Maximum Load Current Setting
Level Setting Accuracy : ± 2%
Linearity : ± 2%
Repeatability : ± 1%
Detection Level : ± 2%
Calibration : Amps

4X Output Relays : 5 Amps 220 V AC
Configuration : Form C (Common, NC / NO)

Fault Indication
Operation : Latch LED on Trip,
record on event and fault records
Clear LED on Resetting

Running Stall Protection
Detection Level : 110 to 300% of Max Load
Trip Delay Adjustable : 0.100 - 1 second

Three phase current measurement
Range : 1 – 400 Amps
Dynamic range : 0% to 100%

Voltage Range : 110 V, 380 V, 400 V,
525 V, 550 V, 680 V,
950 V, 1100 V, 3 K 3 V /
110 V, 6 K 6 V / 110 V,
11 KV / 110 V

Range selection : manual or
automatic selection at power up

Earth Leakage Range : 30 mA to 3 Amps
Trip Time : Inverse Definite
Minimum Time (IDMT) and
Instantaneous Definite Time (IDT)

Real Time Clock
24hr clock (year, month, day, hours and minutes)
Battery back-up (5 days)
Time & date stamping (fault and event records)

Insulation Resistance
Measurement range : 1 to 99 kOhm
Resolution : 1 kOhm

Power Factor Range : 0 to 100% (phase angle 0 to 90°)

Standards compliance and certifications

ISO 9001:2008 : Quality management
CISPR 22:1-15 : Radiated emissions
CISPR 22:1-15 : Conducted emissions (Power Leads)
IEC 61000-4-2 : Electrostatic discharge immunity test
IEC 61000-4-3 : Radiated, radio-frequency, electromagnetic field immunity test
IEC 61000-4-4 : Electrical fast transient / burst
IEC 61000-4-5 : Surge immunity test
IEC 61000-4-6 : Immunity to conducted disturbances, induced by radio-frequency fields
IEC 61000-4-11 : Voltage dips
IEC 61000-3-2 : Harmonic current emissions
IEC 61000-3-3 : Voltage changes, voltage fluctuations and flicker

WHY WAIT TO AUTOMATE?

THE QUESTION
Are you waiting to replace your MCC to automate?
You can automate your existing MCC...

...with minimal wiring changes
- Use existing maintenance staff for changes
- Improve safety by adding a separate MMI/PLC
- Check status of all starters on MCC from safe location within substation
- Start/Stop drive from a safe location in substation

No need to open panel door to measure
- Status of interlock, supply voltage or current - all from MMI display
- Setup NewCode protection relay with through door IrDA communications

This is all done with your existing:
- Switchgear and control gear inventory
- Staff - while training and upskilling in use of PLC and MMI technology
- Maintenance budget with improved plant availability
THE SOLUTION

*NewElec is willing to assist your maintenance staff on site, every step of the way.*

- From your existing MCC schematic diagrams, identify the different starter components
- Suggest modifications while consulting with your electrical maintenance staff
- Finalisation of circuit connections to provide PLC Control/SCADA interface
- Assist maintenance staff in replacing existing protection relay with intelligent NewCode Motor Protection Relay of your choice

THE RESULT

- Existing plant control with optional automated control which can now be linked to Local control HMI or
- Centralised control SCADA
- Improved personnel safety
- No need to open MCC cubicle during fault finding
- Comprehensive protection, earth leakage as well as frozen contactor
- IRDA through door communication NewCode configuration
- NewCode memory module retains relay configuration settings
- Standard HMI/PLC module extracts customized shift reports
- Direct link to engineering /foreman/production supervisor/desktop
- Maintenance staff directly involved in commissioning
- Maintenance staff able to take ownership and continue with production optimization
Accessories

External Memory Module (Part number: FPR0407)
The external, pluggable memory module stores the relay setting, logic function settings and starter configurations. The memory module is updated by the relay each time any of these settings are changed via the front-end software or door mounted MMI. The module is intended to aid field maintenance personnel in the setup of a replacement relay should a relay need to be changed.

Insulation Lock-out Module (Part number: FPR0216)
The insulation resistance of the motor is measured while in a static (not in service) condition. If the resistance drops below 20 kilo ohms, the relay will trip and prevent a start-up.

Expanded I/O Module (Part number: FPR0412)
This is an expansion module with 4 programmable output relays and 8 digital inputs (all with LED status indication). The unit connects to the relay via a T-Bus connector and derives power from the relay’s own power supply.

RTD Expansion Module (Part number: FPR0413)
This is an expansion module with 4 RTD inputs which can accept a NTC, PTC, PT100 or PT1000 input. The unit connects to the relay via the T-Bus connector and derives power from the relay’s own power supply.

4-20 mA Module (Part number: FPR0414)
This is an expansion module with 2 input loops and 2 output loops for 4-20 mA signals. Running amps or thermal capacity, or any analog signal, can be sent out through the output loops. Similarly, any analog input can be sent to the NewCode relay for control purposes.
